**Definitions & limitations:** Recorded net value includes cancelled and returned orders. Retained value proxy excludes either flag, without double-counting overlaps; it is not recognized revenue or profit. Late rates exclude cancelled orders. Return rates use all orders in KPIs and segment scorecards, but exclude cancellations in outcome charts. Filters affect every panel. Monthly daily volume divides by full calendar days, not only days with selected orders. Currency, costs, refunds and acquisition data are absent. Findings are descriptive, not causal. The original dataset has no missing cells or duplicate order IDs, but 29 orders are both returned and cancelled; cancelled orders also carry delivery times and ratings. Carrier differences in the full dataset are not statistically meaningful.
